# Beyond milk

X is a global variable initialized to 0

#### thread I

```
void foo() {
    x++;
};
```

#### thread 2

```
void bar() {
    x--;
};
```

What is the value of x after thread I and 2?

## CPU instruction level

Incrementing (or decrementing) x is not an atomic operation

#### thread I (foo function)

LOAD X
INCR
STORE X

### thread 2 (bar function)

LOAD X
DECR
STORE X
